

Divakar B

Full-Stack Web Developer | PHP Backend Developer

Work experience

SkyneTBee Artificial Intelligence Enterprise pvt ltd
{Internship} (2 years of hands-on-experience)

Production Grade Projects :

- Developed and maintained student admission and member management modules using PHP, MySQL, JavaScript, HTML and CSS.
- Developed online fee payment, receipt generation and fee management functionality
- Built examination, marks, performance and result management modules.
- Developed cash book and ledger management modules.
- Worked on task and project management systems for developers.
- Developed a web-based student house election system to manage candidates, student voting, and election results.
- Developed backend services to fetch attendance data from biometric servers, process and synchronize attendance records, and store them in MySQL for the Sky Attendance Android application.
- AI Vector Search & Matching System — Developed a semantic search system that converts page names/content into vector representations and compares query vectors against stored vectors to rank the most relevant matching pages
- Worked with AWS services for application/server deployment and storage.
- Developed Student ID Card generation functionality
- Snap Talk – Student Explanation & Evaluation System: Developed a teacher-driven system for assigning topics, recording student explanations, providing star ratings, and maintaining audio-based proof of student participation.

Career Objective

I believe that mistakes help me learn and improve my skills. I always enjoy my work and feel happy when I learn something new.

My goal is to improve my technical skills, learn new technologies, and become a better developer. I want to use my knowledge and skills to contribute to the growth of the company.
